

Your traceability solution
from raw material to end product

TraceTales™

A traceability solution for seafood processors, digitally capturing and managing data from raw material through processing, packaging until shipping to customer.

Advantages

- Electronically Capturing Data at The Processing
- Key Data Element (KDE) match with international import requirement
- Improve internal traceability system
- Real time monitoring
- Easy to customize
- Affordable

Data Management Solutions

TraceTales™ provides data management from receiving through shipping to customer, by-product management and stock inventory, provides graphic-based data analysis to assist in decision making, allows simultaneous data entry during throughout the processing stages, providing summary data, sending data to excel files if further analysis is required, and provides graphical data analysis to help decisions making quickly and efficiently.
